

Grouping Selector

- The grouping selector is used to select multiple HTML elements and style them together.
- It helps to minimize the code.

Example (index.html)

```
<!DOCTYPE html>
<html>
  <head>
    <title>
      Search Restaurants near you
    </title>
    <style>
      div, .tech, zone, h1 {
        font-size: 20px;
        font-family: tahoma;
        color: green;
      }
    </style>
  </head>
  <body>
    <h1> Welcome to Edureka</h1>
    <div>
      This is an Internship program
    </div>
    <div class="tech">
      You will use MERN stack to develop the product
    </div>
    <h1 id="one">
      MERN stands for MongoDB, ExpressJS, ReactJS and NodeJS
    </h1>
  </body>
</html>
```

Output

Universal Selector

- The universal selector selects all HTML elements in the web page.
- The **asterisk (*)** character is used to represent a universal selector.

Example (index.html)

```
<!DOCTYPE html>
<html>
  <head>
    <title>
      Search Restaurants near you
    </title>
    <style>
      * {
        font-size: 20px;
        color: green;
        font-family: monospace;
      }
    </style>
  </head>
  <body>
    <h1> Welcome to Edureka</h1>
    <h1 id="one">
      You will use MERN stack to develop the product
    </h1>
    <div class="tech">
      MERN stands for MongoDB, ExpressJS, ReactJS and NodeJS
    </div>
  </body>
</html>
```

Output
